

## User Guide

When the program starts the user will need to allow the app to access the camera. After that the user should see two buttons on the bottom of the screen and an indicator of a city on the floor (if the indicator is not immediately visible the user may have to sweep their phone over the floor for a few seconds until it pops up). When the city indicator is visible and the user taps the screen the city will appear at the point denoted by the indicator. The button in the bottom right corner of the screen will display a top down map of the city when pressed.
